

SHETH L.U.J AND SIR M.V COLLEGE

PRACTICAL NO :- 13

AIM :- Combining datasets vertically (concatenation) using rbind() (R).

INPUT :-

```
library(dplyr)
```

```
spotify_df <- spotify_data.clean[, c("track_id", "artist_name", "track_name")]
```

```
print("--- 1. Original Dataset ---")
```

```
print(spotify_df)
```

```
duplicates_report <- spotify_df %>%
```

```
  group_by(track_id, artist_name, track_name) %>%
```

```
  count() %>%
```

```
  filter(n > 1)
```

```
print("--- 2. Identification Report (Rows that are duplicated) ---")
```

```
print(duplicates_report)
```

```
clean_exact <- spotify_df %>%
```

```
  distinct()
```

```
print("--- 3. Removed Exact Duplicates (distinct) ---")
```

```
print(clean_exact)
```

```
unique_customers <- spotify_df %>%
```

```
  distinct(artist_name, .keep_all = TRUE)
```

```
print("--- 4. Unique Customers Only (Partial Duplicates removed) ---")
```

```
print(unique_customers)
```
